PROFILE

Lead Test Automation Engineer with 16+ years of experience delivering enterprise-scale automation and quality engineering solutions across Retail, Finance, Aviation, and Supply Chain domains.

Specialises in designing and scaling automation ecosystems, modernising CI/CD quality gates, and improving system reliability across complex microservice environments.

Operates within AI-augmented engineering workflows, leveraging IDE-integrated agents and multi-model systems to accelerate development, reduce test debt, and improve delivery efficiency while ensuring all architectural decisions and engineering accountability remain human-led.

Proven track record in leading teams, influencing engineering practices, and delivering high-impact automation solutions at scale in fast-paced Agile environments.

KEY ACHIEVEMENTS

- **Introduced AI-augmented engineering** practices at Foodstuffs, accelerating test creation, improving code quality, and reducing repetitive engineering effort across multiple squads
- **Migrated 500+ legacy test cases** to a modern framework in under one week using AI-assisted modernization techniques, significantly reducing technical debt and maintenance overhead
- Designed and implemented Java-based API automation frameworks **executing 4,000+ tests across 60+ services** nightly in **under 3.5 hours**
- Led automation strategy and governance, **delivering centralized reporting dashboards** using HTML, AWS S3, and DynamoDB to enable data-driven decision-making
- **Delivered API Contract Testing framework** at Air New Zealand, significantly reducing integration defects and improving release confidence
- **Built ERoad's first end-to-end hardware performance testing cycle**, improving IoT device reliability and production stability
- Scaled company-wide UI and API automation at Meaningful Technologies, **reducing manual regression** from **5 days to under 8 hours**

CORE COMPETENCIES

- Designing and scaling enterprise-grade automation frameworks aligned to business and architectural needs
- Driving adoption of AI-augmented quality engineering practices across teams
- Leading cross-functional teams to deliver predictable, high-quality automation outcomes in complex environments
- Embedding Agile, continuous testing, and shift-left quality practices
- Solving complex integration and automation challenges across distributed systems
- Strategic test planning including risk-based coverage and optimisation of testing effort
- Establishing quality governance, reporting, and engineering standards at scale

ENGINEERING CAPABILITIES

- **AI & Engineering Workflows**
  - GitHub Copilot | Claude | Gemini | ChatGPT | Prompt Engineering | AI-assisted test design | AI-driven defect analysis
- **Programming & Scripting**
  - Java | JavaScript | C#.NET | Bash | Shell
- **Test Automation**
  - Playwright | Selenium | Selenide | Appium | Cucumber | SpecFlow | TestNG | JUnit | NUnit

- **API & Integration Testing**
  - REST Assured | Postman | PACT | Kafka Testing
- **Performance Engineering**
  - JMeter | System profiling and performance analysis
- **CI/CD & DevOps**
  - Jenkins | GitLab CI | Bamboo | Maven | Gradle | Docker | Kubernetes
- **Cloud & Data Platforms**
  - AWS | Azure | GCP | DynamoDB | S3 | Firebase | SQL
- **Observability & Reporting**
  - Grafana | Allure | Extent Reports | SonarQube
- **Collaboration & Delivery**
  - JIRA | Confluence | BrowserStack | Sauce Labs

EMPLOYMENT HISTORY

Senior Automation Engineer (Contract) at FoodStuffs North Island, Auckland
August 2022 - Present / Retail & Supply Chain Management

- Led quality engineering across the Middle Layer Services domain, ensuring scalable and reliable delivery across multiple squads in Agile environments
- Architected and implemented a Java-based API automation framework integrated with Bamboo CI/CD for large-scale nightly regression execution
- Introduced AI-augmented engineering workflows to accelerate API test development and reduce repetitive engineering effort across squads
- Migrated 500+ legacy test cases to a modern framework in under one week using AI-assisted techniques
- Developed centralized reporting dashboards using HTML, AWS S3, and DynamoDB to improve visibility and governance
- Established automation standards and governance practices to improve scalability and maintainability
- Mentored engineers across backend, web, and mobile automation, improving team capability and onboarding efficiency

Senior Automation Engineer (Contract) at ERoad New Zealand, Auckland
November 2021 - July 2022 / Transportation & Logistics

- Extended automation frameworks to support CAN bus message handling and IoT validation
- Delivered proof of concept for serial port validation on Android-based devices
- Executed end-to-end validation from hardware through AWS cloud systems
- Led the organisation's first hardware performance testing cycle, improving production stability

Senior Automation Engineer (Contract) at AirNZ, Auckland
June 2021 - November 2021 / Airlines & Aviation

- Reintroduced API Contract Testing (PACT), reducing integration defects and improving release confidence
- Optimised Selenium frameworks to reduce flakiness and improve execution performance
- Led testing delivery within Agile squads, coordinating sprint execution and quality outcomes
- Collaborated with stakeholders to align automation with regulatory and operational requirements

QA/Automation Lead at Meaningful Technologies, Auckland
May 2019 - June 2021 / Information Technology & Services

- Initiated and scaled company-wide UI and API automation integrated with CI/CD pipelines
- Led multi-layer testing across front-end, backend, and performance domains
- Acted as Scrum Master, improving team delivery cadence and collaboration
- Reduced manual regression effort from 5 days to under 8 hours

Lead Automation Engineer (Contract) at NZTA, Auckland

October 2018 - May 2019 / Government Agency - Travel and Transport

- Designed and implemented enterprise API automation platform from scratch
- Established testing standards and reusable framework components
- Built reporting dashboards for senior leadership visibility

Lead Automation Engineer (Contract) at Sky TV New Zealand, Auckland

July 2017 - September 2018 & Broadcasting & Online Streaming

- Initiated API automation for backend systems
- Refactored web and mobile automation frameworks to improve maintainability
- Delivered reporting dashboards showcasing automation maturity

Earlier Career Highlights:

- Test Automation Specialist (Contract) at Spark New Zealand, Auckland (September 2016 - July 2017)
- Software Test Automation Engineer at Fiserv New Zealand, Auckland (May 2015 - September 2016)
- Software Test Analyst - Automation at Perfect Commerce, Auckland (February 2014 - April 2015)
- Senior Software Automation Engineer at AePONA LTD (An Intel Company), Colombo - Sri Lanka (August 2011 - January 2014)
- Test Automation Engineer at Direct Technologies (Pvt.) Ltd, Colombo - Sri Lanka (July 2010 - July 2011)
- Software Engineer (.Net) at FT Services (Pvt.) Ltd., Colombo - Sri Lanka (July 2009 - June 2010)

INDUSTRY DOMAIN EXPERTISE

- Retail & Merchandising | Financial Services & Payments | Aviation | Telecommunications | Transportation & Logistics | Supply Chain

TECHNICAL SYSTEMS EXPERIENCE

- eCommerce Platforms | Banking Systems | Data Pipelines | Enterprise Systems (SAP, CRM) | Retail Analytics Platforms | IoT Systems | Legacy Systems (AS400)

EDUCATION

Master of Science in Information Technology (MSc in IT), Offered by **National University of Ireland, Dublin** in conjunction with National School of Business Management - Sri Lanka

June 2011 - April 2013

Bachelor of Science in Management Information System (BSc in MIS), Offered by **National University of Ireland, Dublin** in conjunction with National School of Business Management - Sri Lanka

October 2006 - March 2011

Certified Tester Foundation Level, ISTQB

July 2013
